## Our Corporate Services

**IBSP Gold** is a registered trade name at IBSP Hong Kong Ltd and its purpose is to facilitate for banks and corporations world-wide with staff a new way to make instant deposits, withdrawals, transfers and payments with Fine Gold (.9999), with minimum 0.001 gram per gold account. The gold is isolated from monetary currencies but at the same time connected to all world-wide currencies and can be used for transfers and payments world-wide.

IBSP gold bullion department in Hong Kong with license to purchase and sell gold online can assist Banks, Corporations and Private persons to purchase fine gold for their money without making a transfer to any third part. The transaction is made direct from the corporate account of the **buyer** at a bank direct to one of our gold refineries world-wide, **seller**. The purchased gold is all the time owned by the account holder and stored at different BRINKS security vaults. The owner of the gold can login to the IBSP Gold system to see all gold in grams, kg or metric tons and make transfers and payments in any currency with gold as the asset base.

Corporations and Private persons can connect gold accounts to a VISA, MasterCard or UnionPay card service and by this spend their gold world-wide in millions of POS terminals at shops for payments and ATMs for withdrawals.

IBSP Gold can be white branded to banks or financial institutions and be used as a core banking service. In comparison with other web-based gold providers, IBSP offer its users to create up to 10 different gold accounts such as; daily spending accounts, salary accounts, IBSP card accounts, savings accounts, investment accounts and charity accounts.

As an IBSP gold account holder, the bank, corporation with staff secure their assets with full insurance from Lloyds' in London.

If the world economy becomes unstable, the gold will still be in a safe location (BRINKS) and not destroyed through super inflation or deflation.

The world economy is becoming more and more unstable and as governments and many banks desperately try to keep and protect the current financial system, it is of great importance to act and secure the future with solid assets as gold.

Most bank account holders are today protected by a limited (100000 Euros) governmental guarantee if the bank goes bankrupt or get insolvent. All IBSP users get 100% guarantees as all IBSP users are owner of their gold at their gold accounts. This means that the IBSP account holders are the sole owner of the gold deposited at their gold accounts, with full insurance from Lloyds ' in London.

All IBSP account holders' gold is stored at BRINKS approved vaults at different locations world-wide and all IBSP gold account holders are able to withdraw the gold and get the gold sent to their address or to a location of their choice.

**The IBSP Gold system is based on cloud technology and includes the following services for Banks, Corporations and their Staff:**

- Core payment and transfer servers with disaster recovery system
- System database with management administration
- Desktop internet payment and transfer service
- Mobile phone internet payment and transfer service
- Payment cards from VISA, MasterCard or UnionPay
- Mobile Point of Sales (POS) for shop owners
